PITCH DECK · MADE TO MOVE

PayRaast

Get paid globally. Cash out locally.

Cross-border stablecoin payments for Pakistani freelancers.

Built on Stellar

THE SOLUTION

1 Create Invoice

Generate professional, structured invoices with explicit service scopes, customer metadata, and exact USDC amounts on Stellar Testnet.

2 Share Direct Link

Clients open a zero-friction payment portal, connect any compatible Stellar wallet (e.g. Freighter), and sign transaction directly.

3 Verify & Settle

Express backend independently validates on-chain transaction details on Horizon, updates invoice state, and issues audit-ready receipts.

Key Differentiator: A purpose-built, freelancer-first payment workflow with an architectural path toward local currency access, bridging global Web3 client payments with domestic Pakistani financial rails.

PMF

BARRIER 01

High Fees & Delays

Cross-border wire transfers and legacy platforms incur 5–12% in fees, multi-day clearing delays, and arbitrary eligibility restrictions for Pakistani talent.

BARRIER 02

Raw Addresses Lack Context

Sharing a bare public key provides no invoice record, no status tracking, no automated accounting reconciliation, and no professional client receipts.

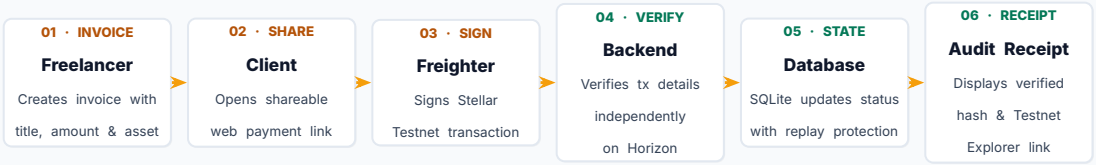
BARRIER 03

The Local Currency Gap

Receiving digital assets does not automatically provide a reliable, compliant way to convert funds into Pakistani Rupee (PKR) and withdraw locally.

Target Audience: Pakistani freelancers and independent professionals working with international clients across engineering, design, marketing, and content creation.

TECHNICAL WORKFLOW



DEMO-READY MVP STACK

Frontend: React, TypeScript, Vite, Tailwind CSS, Freighter API
Backend: Node.js, Express, TypeScript, SQLite, Stellar SDK

Network: Stellar Testnet (Verified on Horizon, Replay-Protected)

FUTURE DIRECTION (PLANNED)

Explore suitable Stellar anchors (SEP-24 / SEP-31) and authorized off-ramp providers for direct PKR payouts to Pakistani bank accounts.

THE TEAM

H

Hakeem

Founder & Full-Stack Engineer

- **5+ Years Experience:** Proven track record building production web platforms, resilient backend APIs, and distributed systems.
- **Web3 & FinTech:** Hands-on experience with blockchain protocols, wallet architectures, and secure payment integrations.
- **Hackathon MVP:** Designed, engineered, and shipped PayRaast end-to-end on Stellar Testnet for HackMeridian 2026.

HACKMERIDIAN 2026 · LISBON

Solving the Last-Mile on Stellar

Pakistan is the world's 4th largest freelancing hub, but talent loses substantial earnings to multi-day clearing delays, high wire fees, and payment friction.

Stellar provides the high-speed, sub-cent settlement rails needed for modern cross-border freelancing. PayRaast turns that into an audit-ready invoicing product.

MVP Focus: Verifiable Testnet Settlement
